

Get involved with your Local Energy Plan

Oban's Local Energy Plan was created using information and aspirations from the Oban community. A group of local people are taking the plan forward to implement the practical actions identified. Find out how you can get involved.

The library has copies of the full plan and shorter summary - read it there!

Follow us on social media for project updates and news on upcoming events

Join the Oban Energy Group to help bring about the actions identified

Visit www.alienergy.org.uk to find out more and download a copy of the short summary or the full plan

For further information or to express an interest in joining the group please contact Katie Evamy on Katie@alienergy.org.uk or 07718426087

and funded by

Taking Oban's Local Energy Plan forward into the future

A group of local people has been working to produce a Local Energy Plan for the Oban community. This plan will enable us to look at our existing and future energy needs - for power, heat and transport - and sets out what the community see as priorities for action. The plan identifies local opportunities to address local priorities in ways which should benefit all of us into the future.

A copy of the plan and summary document can be downloaded from the COBEN page on Allenergy's website: <https://www.alienergy.org.uk>

A group of local people are coming together to take the plan forward, work to implement its practical measures and explore funding options. The group is looking for local people with a range of skills and passions who fancy a get together each month, and in doing so help to shape Oban's energy future. If you would like to get involved then we would love to hear from you.

Would you like to be a part of bringing this Local Energy Plan to life?

Do you believe in moving towards sustainable low carbon energy?

Do you have IT skills and knowledge of promotion through social media?

Are you part of a local group who might be interested in getting involved?

Do you have love and respect for your local environment and its resources?

Do you have some ideas how Oban could generate its own energy?

Do you know some exciting local venues and ideas for meetings?

Do you simply fancy meeting a group of interesting people for tea and cake every so often?

Do you have experience running community groups and willing to share that knowledge with others?

Can you think of some ways to encourage people to get involved and join the group?
